Research on Image Quality Assessment System Based on MATLAB GUI

Abstract

With the speedy development of the Internet technology, digital image is widely used in many fields of human life. The image quality is good or bad will directly affect accuracy of acquired information. So, the image quality assessment has become a basic problem. Since 1980's, the research about image quality assessment has never been interrupted. From the full reference assessment to reduced reference assessment, and then to no-reference process of research, has countless image quality evaluation algorithm came into being. The full reference assessment which is need to have complete information about the original image as a reference, reduced reference assessment which is need only part of the original image information as a reference, and no-reference which is not need original image information as a reference. Each algorithm has its own unique way of thinking, as well as feature extraction methods. Therefore, how to find the optimal image quality assessment algorithm suitable for a certain kind of distorted image quickly and intuitively from numerous image quality assessment algorithm is very valuable.

MATLAB has a powerful matrix computing capabilities, rich library, convenient toolbox, as well as visual GUI interface platform, etc. It is more convenient to deal with images, and is very popular among researchers. Therefore, in order to comparative analysis of advantages and disadvantages of numerous image quality evaluation algorithm and its applicable range of distortion types, the article designs an image quality assessment system based on the visual GUI interface platform provided by MATLAB. The specific contents are as follows:

- (1) firstly, The thesis deeply discussed the research background and significance of the visual image quality assessment system based on MATLAB. Secondly, Analysis of the current domestic and international research results and development on the Visual image quality assessment system, evaluate the performance of quality assessment algorithm and image quality assessment. Finally, the author mainly introduced the research on the full reference and no-reference assessment.
- (2) Simply introduced the correlative theory and techniques of MATLAB GUI visualization platform. It provides the System programming for system programming.

- (3) Detailed introduced the implementation of classical image quality assessment, provides the basic arithmetic for the design of image quality assessment system.
- (4) Writing the callback function for every model in the interface and menu, and then test and analyze every model.

The system main implement some function in image quality assessment, with being convenient to assessment algorithm. For example, encapsulation, comparative analysis and evaluate the performance of image quality assessment algorithm, and leave the interface for system of secondary development. The image file format include of BMP, JPEG,GIF, PNG etc are all supported to use in this system; while also support to read, write, display and quality assessment the image type include of gray image and color image. In addition, there are a lot of functions in this system, for example, image processing module includes adding noise, gray, distortion and JPEG compression; open file module includes open the image or file, save the image or file, exit system etc; assessment algorithms library module includes add a new algorithm, modify, delete and selection algorithm; algorithm assessment module include evaluate the performance of algorithm; assessment algorithm analysis module includes comparative analysis of full reference and no-reference assessment algorithm; other modules includes show the current date/time of windows system, simple maintenance of the system. Is used in the experimental part of this paper, have five kinds of (SSIM, MSSIM, MSE, PSNR, Universal) full reference and six kinds of (HFSSIM, HSPSNR, NIQE, DIIVINE, JPEG, new SVD) no-reference assessment algorithms.

Key Words: MATLAB GUI, image quality assessment algorithm, encapsulate algorithms, secondary development, performance assessment

致谢

转眼间,我已经在华东交通大学度过了青春的7年时光。7年,一段不算短的时间,从本科到研究生,七年的时间,非但没有让我丢失对学校的新鲜感,反而有了更深的感情。学校的一草一木都见证了我从青涩的少女走向了成熟。而现在,又该对我三年的硕士研究生生涯说再见了。在论文即将完成的时候,敲下"致谢"两个字,对那些曾经帮助过我,引导过我,激励过我的人,表达感激。

首先,非常感谢我的导师黄晓生教授,这三年的教导。在学习上,他从研究方向到毕业论文的选题和定稿,对我不断的指点和帮助,都让我获益匪浅;在生活上,他严谨细致、一丝不苟的作风一直是我学习的榜样。能成为黄老师的学生,我感到很荣幸。在此谨向黄老师表达我最真诚的敬意和感谢!

其次,我要感谢我的室友,从本科到研究生,七年的陪伴,七年的互相学习、互相帮助,她给了我很多的关爱和动力。从她身上,我看到了什么是好脾气、什么是努力。

另外,还要感谢实验室的各位师兄姐弟妹们,他们的科研精神,给了我很大的动力。 在我受挫折时,感谢师姐周小辞的安慰和鼓励,同时也感谢贺亚飞给我的关心。

最后,我还要衷心的感谢我的父母,是他们教会了我努力了就会有回报,教会了为人处事,并给我提供了一个美好、健康的成长环境。同时也要感谢华东交通大学信息工程学院的所有老师们,有他们的教导,才有现在的我;尤其要感谢谢昕老师,从他的身上不仅得到了长辈般的关怀,同时还得到了朋友般的鼓励和支持。再次向那些关心和帮助过我的人表示衷心的感谢!

感谢所有参加论文评审和答辩的老师!
